FOREWORD

In support of their intelligence production responsibilities, the various intelligence components of the US Government issue requirements and guidance materials pertaining to foreign economic, technical and scientific activities. The Subcommittee on Requirements and Facilities for Collation, of the Economic Intelligence Committee, felt that a bibliographic listing of the more significant requirements and collection guidance materials in these fields would provide a convenient reference for collectors as well as for those concerned with production and requirements.

This bibliography has been arranged alphabetically by subject. An attempt has been made to avoid over-lapping among the subject categories. Requirements and requirements guidance material such as the Basic Air Intelligence Requirements and the Air Intelligence Guide which encompass a wide variety of Subjects have been included under the "General" heading.

Three criteria have been applied in compiling this bibliography:

1. Economic, technical and scientific subjects: It is limited to certain economic, technical and scientific subjects, the over-all aspects of which, are common targets of many collectors. Subjects which are primarily of interest to one member (e.g. political and sociological - of primary interest to the Department of State, and air order of battle - of primary concern to the Air Force) have been omitted.
2. Long-term Requirements: It is limited to guide type requirements of sufficiently basic subject coverage that they will remain active as collection tools for a relatively long period. Ad hoc requirements and those subject to frequent revision have not been included.
3. General Applicability: It is limited to those requirements which are applicable to exploitation of many different sources of intelligence information. Specific requirements directed at one-time, one-source exploitation are, therefore, not included.

It is hoped that this bibliography may serve a dual purpose:

1. Eliminate unnecessary duplication: Because most members of the intelligence community issue economic, technical

and scientific requirements, one member may find the standing requirements and guidance material published by other members usable in whole or in part in its own collection effort. In such cases, unnecessary duplication of existing material might be avoided and all members would gain from the interchange and use of requirements published by other members.

2. Collection Aid: Extensive distribution of this bibliography could show collectors the extent of permanent requirements and guidance material available for use as collection instruments. In some cases, full exploitation of technical sources by non-technical collectors might be enhanced if a particular requirement or requirement collection guide were available and used.

The following abbreviations are used in this bibliography:

25X1

25X1

25X10

Classifications

CONF - Confidential
TS - Top Secret
UNCL - Unclassified
